How to Display Blog Posts on Your Website

Before you begin

- The producer dashboard includes Posts, Tags, Categories, and Comments under Posts.
- Blog access is controlled by the producer’s subscription plan. When Blog is unavailable, dynamic blog functions are locked, but static website pages can still be created.
- Posts are distinct from static pages created in Kong Builder. Website pages and navigation menus are managed separately.
- Images used in posts should be selected from the producer’s available media assets; check published appearance after saving.

Step-by-step

1. Confirm your plan has the Blog feature enabled.
2. Create and publish at least one post.
3. Use the available theme or builder controls to expose the blog listing, then verify the live site.

Verify the result

Check the saved dashboard record and, where applicable, the published producer website. Test only with your own content or contact details, and do not assume a setting is active until the current interface confirms it.

Editorial review required: This article is based on established BeatKongs specifications. Confirm
