How to Collect Email Subscribers

Before you begin

- The producer dashboard has Newsletter → Subscribers and Campaigns, plus a separate Messages section.
- Newsletter access is controlled by the producer’s subscription plan. When disabled, signup forms may still collect subscriber records while the newsletter dashboard is locked.
- Subscribers and campaigns are different: the subscriber list stores contacts; campaigns are messages prepared for selected recipients.
- Customer messages are managed separately from newsletter campaign sending.

Step-by-step

1. Open Newsletter → Subscribers if your subscription permits access.
2. Review the subscriber list or place an available signup form on your website using Kong Builder.
3. Submit a test signup with an address you control and confirm the subscriber record appears where accessible.

Verify the result

Check the saved dashboard record and, where applicable, the published producer website. Test only with your own content or contact details, and do not assume a setting is active until the current interface confirms it.
