How to Set Social Sharing Images

What to know

Social previews may use page metadata or a supported SEO image setting. Exact controls depend on the current page editor.

Steps

1. Open the page’s SEO settings and check for a social sharing image field.
2. If available, select a suitable image from the Media Library.
3. Publish and test the resulting link preview; external services may cache older images.

Review note: This article is based on BeatKongs product decisions and known dashboard sections. Confirm exact labels and feature availability in the current interface before publishing.

Need help?

If the described option is missing, record the affected page, your workspace, and the expected behavior. Use the Report Issues option in your producer dashboard to contact BeatKongs Support.
