# How to Connect a Custom Domain

## What to know

Custom-domain support is part of the BeatKongs domain architecture and may depend on the subscription plan.

## Steps

1. Open Settings → Domain & SSL and check that your plan permits custom domains.
2. Follow the exact DNS records shown in the dashboard or official BeatKongs instructions; do not guess record targets.
3. Allow time for DNS and SSL validation before switching traffic.

**Review note:** This article is based on BeatKongs product decisions and known dashboard sections. Confirm exact labels and feature availability in the current interface before publishing.

## Need help?

If the described option is missing, record the affected page, your workspace, and the expected behavior. Use the Report Issues option in your producer dashboard to contact BeatKongs Support.
