How to Change Your Custom Domain

What to know

Changing a custom domain can affect DNS, SSL issuance, search links, and existing traffic.

Steps

1. Review the current domain under Settings → Domain & SSL.
2. Confirm that the new domain is eligible and that the platform presents a supported change workflow.
3. Configure only the new DNS records supplied and verify HTTPS before retiring the old setup.

Review note: This article is based on BeatKongs product decisions and known dashboard sections. Confirm exact labels and feature availability in the current interface before publishing.

Need help?

If the described option is missing, record the affected page, your workspace, and the expected behavior. Use the Report Issues option in your producer dashboard to contact BeatKongs Support.
