How Two-Factor Authentication Works

What to know

- Open Settings → Profile Settings in your producer dashboard. Review the available account fields and save only the changes you intend to make.
- Use a unique password and protect the email account associated with your BeatKongs login. Do not share passwords, payment credentials, or verification codes.

Step-by-step

1. Sign in to your producer dashboard.
2. Open Settings → Profile Settings and locate the applicable account setting.
3. Save your changes if the current interface offers that option, then verify the result.

Before you finish

Check the result in the current producer dashboard and, where relevant, on the published website. Save the affected page URL and screenshots if you need support.

Feature status to verify: Two-factor authentication was requested for a security milestone; its deployment has not been verified. Do not claim it is active until confirmed.

Publication review: Confirm the exact labels and current feature behavior against the live BeatKongs build before making this article public.
