How to Clear Your Website Cache

What to know

- The producer dashboard provides Clear Cache with an ALL option. Clear it after saving changes, then reload the live page and test in a private window.

Step-by-step

1. Save the page or setting in Kong Builder.
2. Use Clear Cache → ALL from the producer dashboard.
3. Reload the live page and test in a private window; compare the published URL with the builder preview.

Before you finish

Check the result in the current producer dashboard and, where relevant, on the published website. Save the affected page URL and screenshots if you need support.

Publication review: Confirm the exact labels and current feature behavior against the live BeatKongs build before making this article public.
