Understanding the Kong Builder Interface

Learn how the kong builder interface works in the BeatKongs website editor. Follow the steps below in your own producer dashboard and check the result on the visitor-facing website before publishing.

Before you begin

Sign in to your BeatKongs producer account and open **Website → Edit Website**. Work on a page you can safely test. Builder controls may vary by theme, selected element and plan.

Step-by-step instructions

1. **Step 1.** Open Kong Builder and identify the central page canvas.

> SCREENSHOT TO ADD: Screenshot needed: Builder overview with canvas, top toolbar and right panel identified

Screenshot to capture: Builder overview with canvas, top toolbar and right panel identified.

2. **Step 2.** Locate the top toolbar, the left-side tools, and the contextual settings panel.
3. **Step 3.** Click a heading and note the selected-element outline and floating controls.

> SCREENSHOT TO ADD: Screenshot needed: Selected heading with floating controls and Content settings

Screenshot to capture: Selected heading with floating controls and Content settings.

4. **Step 4.** Compare the available settings when you select an image or a section instead.

> SCREENSHOT TO ADD: YouTube demo thumbnail needed: Understanding the Kong Builder Interface

YouTube demo to record (2–4 minutes): Understanding the Kong Builder Interface. Show the full sequence in the steps above; replace this thumbnail with the real YouTube embed when ready.

Important: Changes can affect other elements or screen sizes. Review the result on both desktop and mobile before you consider the task finished.

How to confirm it worked

Save the page, open the visitor-facing website, refresh it, and inspect the changed section on desktop and mobile. If the task involves a link, form, player, menu or other interactive feature, test that interaction directly on the live site.

Troubleshooting

- **Cannot find the control?** Select the intended element first. Some settings only appear for certain components, themes or plans.
- **Change did not appear?** Check that the correct page was saved, refresh the live page, and check whether caching is showing an older version.
- **Mobile layout looks wrong?** Reopen device preview and inspect the affected element’s width, spacing and visibility.
- **Feature is missing or not working?** Avoid deleting working content. Use Report Issues from your producer dashboard and describe the page, control and expected result.
