How to Add a Pre-Designed Section

Learn how to Add a Pre-Designed Section in your BeatKongs producer website using Kong Builder. Follow the steps below in your own producer dashboard and check the result on the visitor-facing website before publishing.

Before you begin

Sign in to your BeatKongs producer account and open **Website → Edit Website**. Work on a page you can safely test. Builder controls may vary by theme, selected element and plan.

Step-by-step instructions

1. **Step 1.** Open Add in Kong Builder and browse the available designed sections.

> SCREENSHOT TO ADD: Screenshot needed: Design section library and a chosen preview

Screenshot to capture: Design section library and a chosen preview.

2. **Step 2.** Preview a section that fits the purpose of your page.
3. **Step 3.** Insert the section at the desired location, then replace all demonstration text and imagery.

> SCREENSHOT TO ADD: Screenshot needed: Inserted design section after demo text replacement

Screenshot to capture: Inserted design section after demo text replacement.

4. **Step 4.** Check desktop and mobile layouts before saving.

> SCREENSHOT TO ADD: YouTube demo thumbnail needed: How to Add a Pre-Designed Section

YouTube demo to record (2–4 minutes): How to Add a Pre-Designed Section. Show the full sequence in the steps above; replace this thumbnail with the real YouTube embed when ready.

Important: Changes can affect other elements or screen sizes. Review the result on both desktop and mobile before you consider the task finished.

How to confirm it worked

Save the page, open the visitor-facing website, refresh it, and inspect the changed section on desktop and mobile. If the task involves a link, form, player, menu or other interactive feature, test that interaction directly on the live site.

Troubleshooting

- **Cannot find the control?** Select the intended element first. Some settings only appear for certain components, themes or plans.
- **Change did not appear?** Check that the correct page was saved, refresh the live page, and check whether caching is showing an older version.
- **Mobile layout looks wrong?** Reopen device preview and inspect the affected element’s width, spacing and visibility.
- **Feature is missing or not working?** Avoid deleting working content. Use Report Issues from your producer dashboard and describe the page, control and expected result.
