How to Add Animations and Scroll Effects

Learn how to Add Animations and Scroll Effects in your BeatKongs producer website using Kong Builder. Follow the steps below in your own producer dashboard and check the result on the visitor-facing website before publishing.

Before you begin

Sign in to your BeatKongs producer account and open **Website → Edit Website**. Work on a page you can safely test. Builder controls may vary by theme, selected element and plan.

Step-by-step instructions

1. **Step 1.** Select the element you want to animate.

> SCREENSHOT TO ADD: Screenshot needed: Animation settings in the current Builder if supported

Screenshot to capture: Animation settings in the current Builder if supported.

2. **Step 2.** Check Advanced or Style for animation and scroll-effect controls in the current Builder.
3. **Step 3.** Choose a subtle effect if supported and test how it behaves while scrolling.

> SCREENSHOT TO ADD: Screenshot needed: Selected animated element on live page

Screenshot to capture: Selected animated element on live page.

4. **Step 4.** Avoid effects that hide essential content or interfere with mobile performance.

Important: Motion effects should not prevent users from reading or operating the page.

How to confirm it worked

Save the page, open the visitor-facing website, refresh it, and inspect the changed section on desktop and mobile. If the task involves a link, form, player, menu or other interactive feature, test that interaction directly on the live site.

Troubleshooting

- **Cannot find the control?** Select the intended element first. Some settings only appear for certain components, themes or plans.
- **Change did not appear?** Check that the correct page was saved, refresh the live page, and check whether caching is showing an older version.
- **Mobile layout looks wrong?** Reopen device preview and inspect the affected element’s width, spacing and visibility.
- **Feature is missing or not working?** Avoid deleting working content. Use Report Issues from your producer dashboard and describe the page, control and expected result.
