Understanding Global Design Settings

Learn how global design settings works in the BeatKongs website editor. Follow the steps below in your own producer dashboard and check the result on the visitor-facing website before publishing.

Before you begin

Sign in to your BeatKongs producer account and open **Website → Edit Website**. Work on a page you can safely test. Builder controls may vary by theme, selected element and plan.

Step-by-step instructions

1. **Step 1.** Open Global in Kong Builder and review the available site-wide design settings.

> SCREENSHOT TO ADD: Screenshot needed: Global design settings panel

Screenshot to capture: Global design settings panel.

2. **Step 2.** Identify which controls apply across pages rather than only to the selected element.
3. **Step 3.** Make a small test adjustment and check at least two pages.

> SCREENSHOT TO ADD: Screenshot needed: Two pages showing the same global style

Screenshot to capture: Two pages showing the same global style.

4. **Step 4.** Revert unwanted global changes and save only after verifying their scope.

Important: Changes can affect other elements or screen sizes. Review the result on both desktop and mobile before you consider the task finished.

How to confirm it worked

Save the page, open the visitor-facing website, refresh it, and inspect the changed section on desktop and mobile. If the task involves a link, form, player, menu or other interactive feature, test that interaction directly on the live site.

Troubleshooting

- **Cannot find the control?** Select the intended element first. Some settings only appear for certain components, themes or plans.
- **Change did not appear?** Check that the correct page was saved, refresh the live page, and check whether caching is showing an older version.
- **Mobile layout looks wrong?** Reopen device preview and inspect the affected element’s width, spacing and visibility.
- **Feature is missing or not working?** Avoid deleting working content. Use Report Issues from your producer dashboard and describe the page, control and expected result.
