How to Enable Sticky Navigation

Learn how to Enable Sticky Navigation in your BeatKongs producer website using Kong Builder. Follow the steps below in your own producer dashboard and check the result on the visitor-facing website before publishing.

Before you begin

Sign in to your BeatKongs producer account and open **Website → Edit Website**. Work on a page you can safely test. Builder controls may vary by theme, selected element and plan.

Step-by-step instructions

1. **Step 1.** Open NAV and locate the sticky navigation toggle.

2. **Step 2.** Enable or disable it according to the desired scrolling behavior.
3. **Step 3.** Save, then scroll a long page on desktop and mobile.

> SCREENSHOT TO ADD: Screenshot needed: Scrolled page showing the header staying in position

Screenshot to capture: Scrolled page showing the header staying in position.

4. **Step 4.** Check that the header does not cover content or create an unwanted mobile gap.

Important: Sticky navigation is easiest to verify by scrolling the published page, not just looking at the canvas.

How to confirm it worked

Save the page, open the visitor-facing website, refresh it, and inspect the changed section on desktop and mobile. If the task involves a link, form, player, menu or other interactive feature, test that interaction directly on the live site.

Troubleshooting

- **Cannot find the control?** Select the intended element first. Some settings only appear for certain components, themes or plans.
- **Change did not appear?** Check that the correct page was saved, refresh the live page, and check whether caching is showing an older version.
- **Mobile layout looks wrong?** Reopen device preview and inspect the affected element’s width, spacing and visibility.
- **Feature is missing or not working?** Avoid deleting working content. Use Report Issues from your producer dashboard and describe the page, control and expected result.
