How to Configure Header Icons and Features

Learn how to Configure Header Icons and Features in your BeatKongs producer website using Kong Builder. Follow the steps below in your own producer dashboard and check the result on the visitor-facing website before publishing.

Before you begin

Sign in to your BeatKongs producer account and open **Website → Edit Website**. Work on a page you can safely test. Builder controls may vary by theme, selected element and plan.

Step-by-step instructions

1. **Step 1.** Open NAV and inspect the available cart, search, account, social and profile toggles.

> SCREENSHOT TO ADD: Screenshot needed: NAV icon toggles for cart/search/account/social/profile

Screenshot to capture: NAV icon toggles for cart/search/account/social/profile.

2. **Step 2.** Enable only features your storefront actually uses.
3. **Step 3.** Check the selected menu and logo settings.

> SCREENSHOT TO ADD: Screenshot needed: Live header with enabled icons visible

Screenshot to capture: Live header with enabled icons visible.

4. **Step 4.** Save and test each visible icon on the live site, including mobile.

Important: Changes can affect other elements or screen sizes. Review the result on both desktop and mobile before you consider the task finished.

How to confirm it worked

Save the page, open the visitor-facing website, refresh it, and inspect the changed section on desktop and mobile. If the task involves a link, form, player, menu or other interactive feature, test that interaction directly on the live site.

Troubleshooting

- **Cannot find the control?** Select the intended element first. Some settings only appear for certain components, themes or plans.
- **Change did not appear?** Check that the correct page was saved, refresh the live page, and check whether caching is showing an older version.
- **Mobile layout looks wrong?** Reopen device preview and inspect the affected element’s width, spacing and visibility.
- **Feature is missing or not working?** Avoid deleting working content. Use Report Issues from your producer dashboard and describe the page, control and expected result.
