How to Configure Global Player Settings

Learn how to Configure Global Player Settings in your BeatKongs producer website using Kong Builder. Follow the steps below in your own producer dashboard and check the result on the visitor-facing website before publishing.

Before you begin

Sign in to your BeatKongs producer account and open **Website → Edit Website**. Work on a page you can safely test. Builder controls may vary by theme, selected element and plan.

Step-by-step instructions

1. **Step 1.** Open PLAYERS or the current global player settings in Kong Builder.

> SCREENSHOT TO ADD: Screenshot needed: PLAYERS global settings panel

Screenshot to capture: PLAYERS global settings panel.

2. **Step 2.** Review player display and behavior options available for your theme.
3. **Step 3.** Test playback and navigation using an actual uploaded beat.

> SCREENSHOT TO ADD: Screenshot needed: Live player with real beat playing

Screenshot to capture: Live player with real beat playing.

4. **Step 4.** Save and verify the player on the live site, including mobile.

> SCREENSHOT TO ADD: YouTube demo thumbnail needed: How to Configure Global Player Settings

YouTube demo to record (2–4 minutes): How to Configure Global Player Settings. Show the full sequence in the steps above; replace this thumbnail with the real YouTube embed when ready.

Important: The global player should be tested with real beat audio and with page-to-page navigation.

How to confirm it worked

Save the page, open the visitor-facing website, refresh it, and inspect the changed section on desktop and mobile. If the task involves a link, form, player, menu or other interactive feature, test that interaction directly on the live site.

Troubleshooting

- **Cannot find the control?** Select the intended element first. Some settings only appear for certain components, themes or plans.
- **Change did not appear?** Check that the correct page was saved, refresh the live page, and check whether caching is showing an older version.
- **Mobile layout looks wrong?** Reopen device preview and inspect the affected element’s width, spacing and visibility.
- **Feature is missing or not working?** Avoid deleting working content. Use Report Issues from your producer dashboard and describe the page, control and expected result.
