How to Edit an Existing Page

Update page content while keeping the existing page address. Follow the steps below in your BeatKongs producer dashboard and verify the result on your live website.

Before you begin

Sign in to your BeatKongs producer account. You will use **Website → Pages**, **Website → Menus**, or **Website → Edit Website** depending on the task. If you are making a significant change, save a copy of important content first.

Step-by-step instructions

1. **Step 1.** Open Website → Pages and locate the page to change.

   > SCREENSHOT TO ADD: Screenshot needed: Pages list with an existing page selected

   Screenshot to capture: Pages list with an existing page selected.
2. **Step 2.** Open its editing action or open Website → Edit Website and select that page.
3. **Step 3.** In Kong Builder, select the exact text, image, section, or component you want to

change.

4. **Step 4.** Edit content in the canvas or the corresponding settings panel.

Screenshot to capture: Selected page element and editing settings in Kong Builder.

5. **Step 5.** Save your changes and use View Live Website to verify the correct page.

Important: Editing an existing page is usually safer than deleting it and creating a replacement.

How to confirm it worked

Save your changes, open **View Live Website**, and refresh the affected page. Check the correct URL, page content, and any relevant header or footer links. Repeat the check on mobile if navigation or layout was changed.

Troubleshooting

- **Page or menu item is missing?** Confirm you are in the intended producer website and that you saved the correct page or menu.
- **Link opens a 404 page?** Copy the destination from the live page instead of guessing its file path, then update the menu link.
- **Changes are not visible?** Refresh the website and check for cached content; confirm the correct header or footer menu is selected in Kong Builder.
- **Still stuck?** Use **Report Issues** from the producer dashboard and include the page title, URL, and a screenshot.
