How to Delete a Website Page

Remove a page carefully without losing content you still need. Follow the steps below in your BeatKongs producer dashboard and verify the result on your live website.

Before you begin

Sign in to your BeatKongs producer account. You will use **Website → Pages**, **Website → Menus**, or **Website → Edit Website** depending on the task. If you are making a significant change, save a copy of important content first.

Step-by-step instructions

1. **Step 1.** Open Website → Pages and identify the exact page to remove.

   > SCREENSHOT TO ADD: Screenshot needed: Pages list with delete action for the selected page

   Screenshot to capture: Pages list with delete action for the selected page.
2. **Step 2.** Check whether the page is used in your header menu, footer menu, or buttons on other pages.

3. **Step 3.** If available, make a backup or copy of content you may need again.
4. **Step 4.** Use the page deletion control only after confirming the correct page and any warning dialog.

> SCREENSHOT TO ADD: Screenshot needed: Deletion confirmation and menu cleanup

   Screenshot to capture: Deletion confirmation and menu cleanup.
5. **Step 5.** Remove or update navigation links to the deleted page, then test the live site.

Important: Deletion can be irreversible. Never delete your homepage or a shared template without understanding where it is used.

How to confirm it worked

Save your changes, open **View Live Website**, and refresh the affected page. Check the correct URL, page content, and any relevant header or footer links. Repeat the check on mobile if navigation or layout was changed.

Troubleshooting

- **Page or menu item is missing?** Confirm you are in the intended producer website and that you saved the correct page or menu.
- **Link opens a 404 page?** Copy the destination from the live page instead of guessing its file path, then update the menu link.
- **Changes are not visible?** Refresh the website and check for cached content; confirm the correct header or footer menu is selected in Kong Builder.
- **Still stuck?** Use **Report Issues** from the producer dashboard and include the page title, URL, and a screenshot.
