How to Add Pages to Your Navigation Menu

Make an existing page easy for visitors to find. Follow the steps below in your BeatKongs producer dashboard and verify the result on your live website.

Before you begin

Sign in to your BeatKongs producer account. You will use **Website → Pages**, **Website → Menus**, or **Website → Edit Website** depending on the task. If you are making a significant change, save a copy of important content first.

Step-by-step instructions

1. **Step 1.** Open Website → Menus from the producer dashboard.

> SCREENSHOT TO ADD: Screenshot needed: Menus manager showing the header or footer menu

2. **Step 2.** Identify the menu used by your site header or footer.
3. **Step 3.** Add the existing page using the available page-link option; if the page is being created, use ADD TO MENU in the Add Page form.

4. **Step 4.** Set a clear visitor-facing menu label and save the menu.

> SCREENSHOT TO ADD: Screenshot needed: Live navigation showing newly added page link

Screenshot to capture: Live navigation showing newly added page link.

5. **Step 5.** Open the live website and click the new link on desktop and mobile.

Important: Creating a page does not necessarily make it appear in your navigation.

How to confirm it worked

Save your changes, open **View Live Website**, and refresh the affected page. Check the correct URL, page content, and any relevant header or footer links. Repeat the check on mobile if navigation or layout was changed.

Troubleshooting

- **Page or menu item is missing?** Confirm you are in the intended producer website and that you saved the correct page or menu.
- **Link opens a 404 page?** Copy the destination from the live page instead of guessing its file path, then update the menu link.
- **Changes are not visible?** Refresh the website and check for cached content; confirm the correct header or footer menu is selected in Kong Builder.
- **Still stuck?** Use **Report Issues** from the producer dashboard and include the page title, URL, and a screenshot.
